

Bugs Scrum #2

Li Pan, Abdelrahman Rabaa, Renz Rivero

Status Description

Current status: Green — We are focusing on medical emergency scenario MVP.

Li: Research; UI Architecture; Updated Empathy Map; Icon;

Renz: Lo-Fi; Initiated a Flutter project with a basic navigation bar implementation

Rabaa: Research; Update story map; Lo-Fi; Source Control UI Developing

Project issues

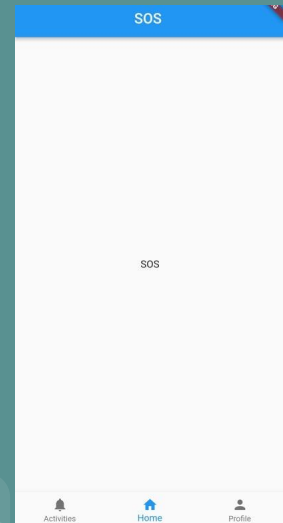

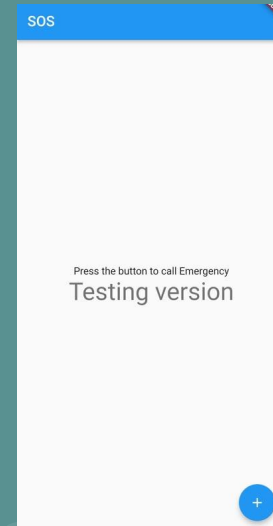

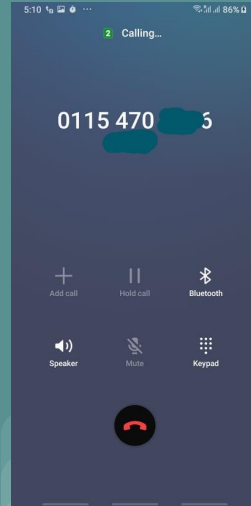

- **Programming skills**
- **Privacy policy needs to be considered.**

Project changes

- **The project's main idea is still the same. For our MVP, we plan on focusing on a medical scenario. In terms of sensors, its usability is still under discussion.**

Documentation overview and/or project demo

- MVP Lo-Fi Medical personal Prototype
- Story Map about Medical Personal
- Empathy Map (communication specialist)
- Implementation a dial button by using Flutter

Next up

- Do general research on mobile sensors and see what's possible for our application
- Implement UI placeholders on our app based off of our prototypes
 - Activity - Rabaa
 - SOS - Renz
 - Profile - Li
- With a defined reasonable MVP, we can now plan weekly sprints to slowly replace placeholders to actual implementations. TBD

➤ **Does the team feel "on track"? (reiterate the above colour status)**

Our team feels good about our progress. We believe that we are at a green status because we already have a simple demo of the main function of our app (calling) programmed while still in the design phase.

➤ **What progress does the team particularly feel good (great) about?**

We feel good about the fact that we are still making our prototypes and are still designing but have started programming the bare minimum.

➤ **What barriers (if any) does the team feel are a current impediment to success?**

Not necessarily an impediment but the contradiction in expectations about designing first versus jumping into programming does get in our head. We just know that it is a balancing act and things can be done concurrently.

➤ **What help (if any) does the team require to move positively forward?**

Our weekly meetings are set with Dr. Morgan and one meeting with the officer from RCMP gives us lots of good suggestions to keep our team moving positively forward.

➤ **What questions or concerns does the team have (if any)?**

We are currently concerned about the fact that we are designing and programming simultaneously. Nothing can be planned perfectly but it is a concern that we may be wasting time and end up refactoring.
